

TERPINATOR® FEED CHART

TERPINATOR® can be used during the entire life cycle of the plant.

Vegetating phases of growth: Add 1.25 - 2.5 ml per liter of water.

Reproduction and fruit-set stages of growth: Add 2.5 - 7.5 ml per liter of water.

TERPINATOR® won't burn and can be used with any growing media, fertilizer, or nutrient program. TERPINATOR® has a neutral pH.

| Week | 1-4 | 5-6 | 7-8 | 9-12+ |
|--------|--------|--------|--------|--------|
| Amount | 1.25ml | >2.5ml | 3.75ml | 6.25ml |

- Terpinator® can be fed as frequently as every watering
- For deep water culture systems: change reservoir once every 3-5 days. Maintain aeration within the reservoir when using Terpinator®
- Safe for use in all fertilizer injectors
- Store in a cool, dry place, away from direct sunlight
- All measurements are per liter of water
- DO NOT use as a foliar spray
